### Guide To The Interface

# iWeb '09: The Main Window

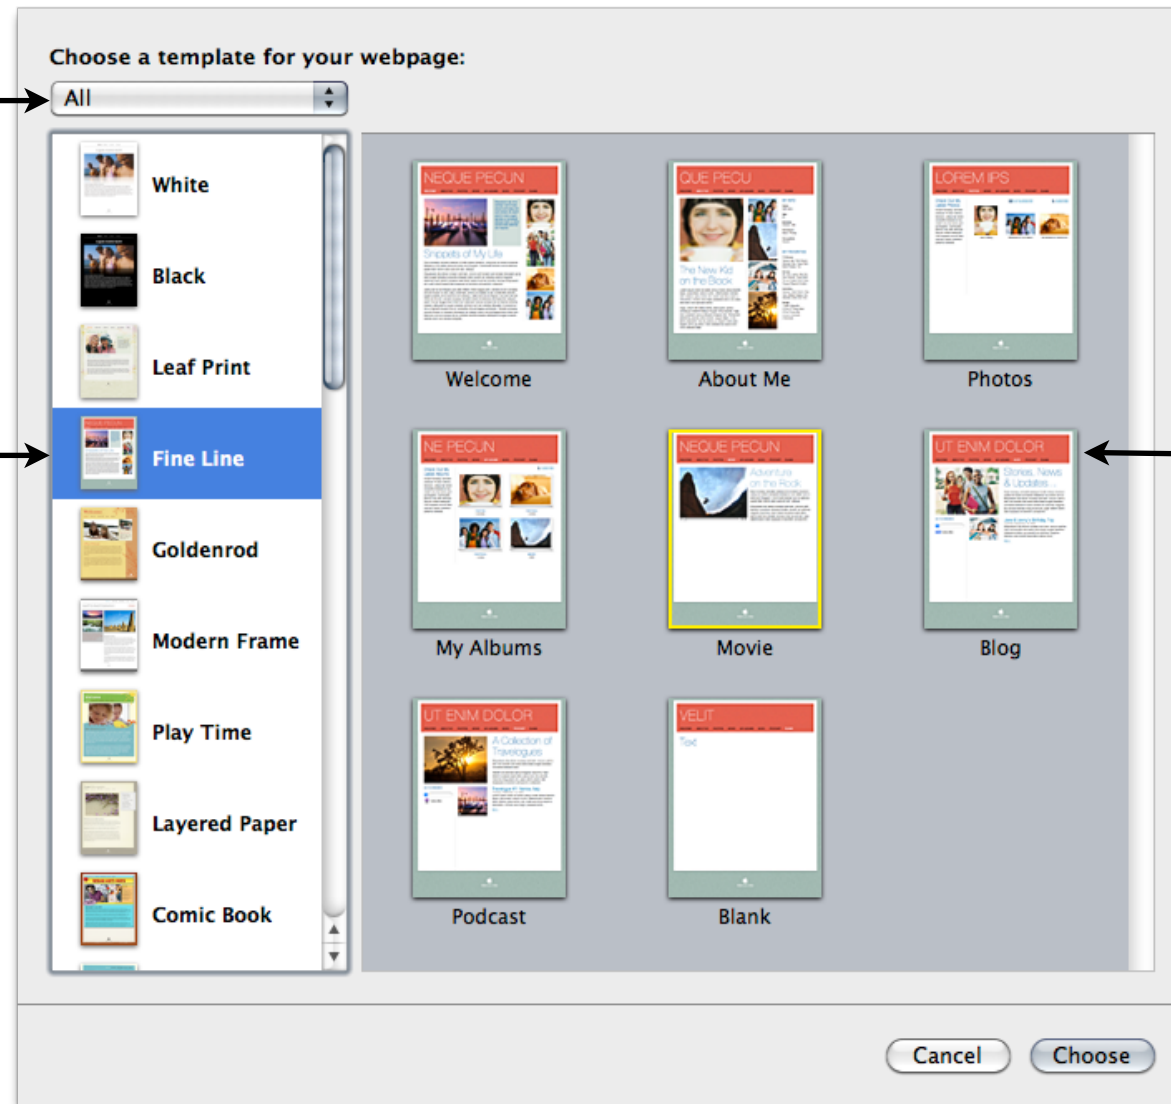

# iWeb '09: New Page Dialog Box

## Theme Filter

Allows you to filter the available themes based on iWeb version.

## Website Themes

Allows you to select which theme you want to use for your website.

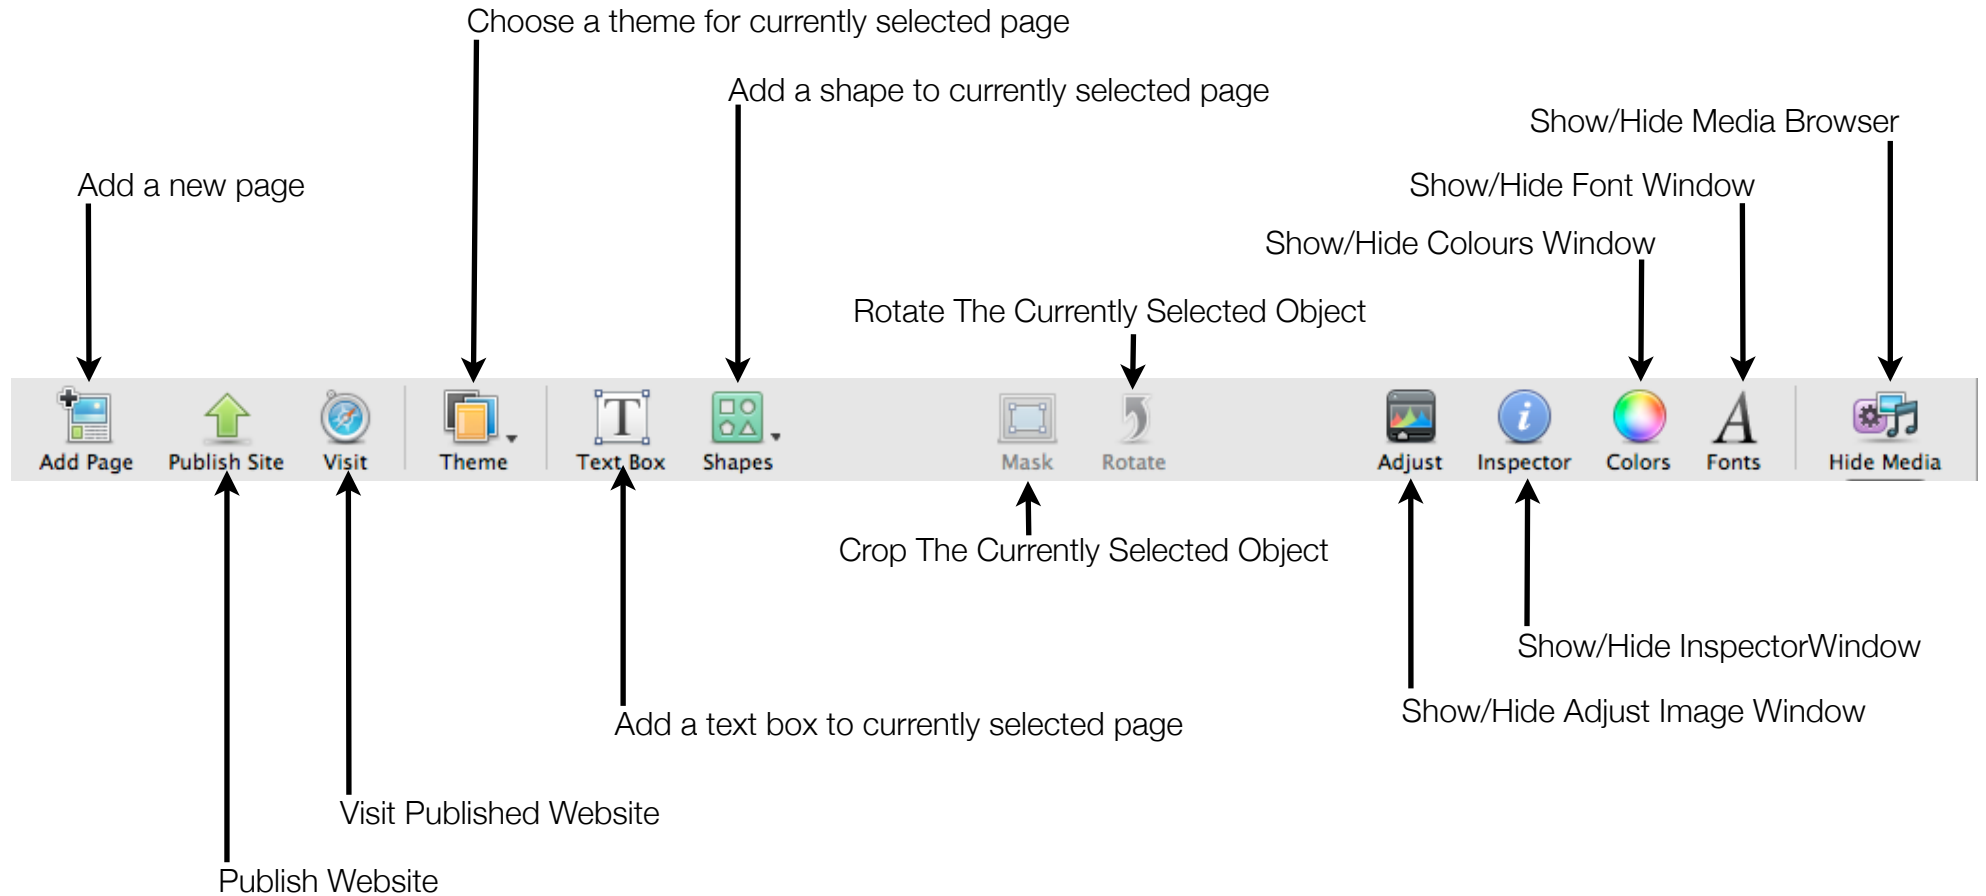

## Page Templates

Allows you to choose which page you want to insert into your website.

By default there are 8 page templates available for you to use.

# iWeb '09: Toolbar

# iWeb '09: Media Browser

## Media Type Buttons

Select which type of media shows up in the media browser.

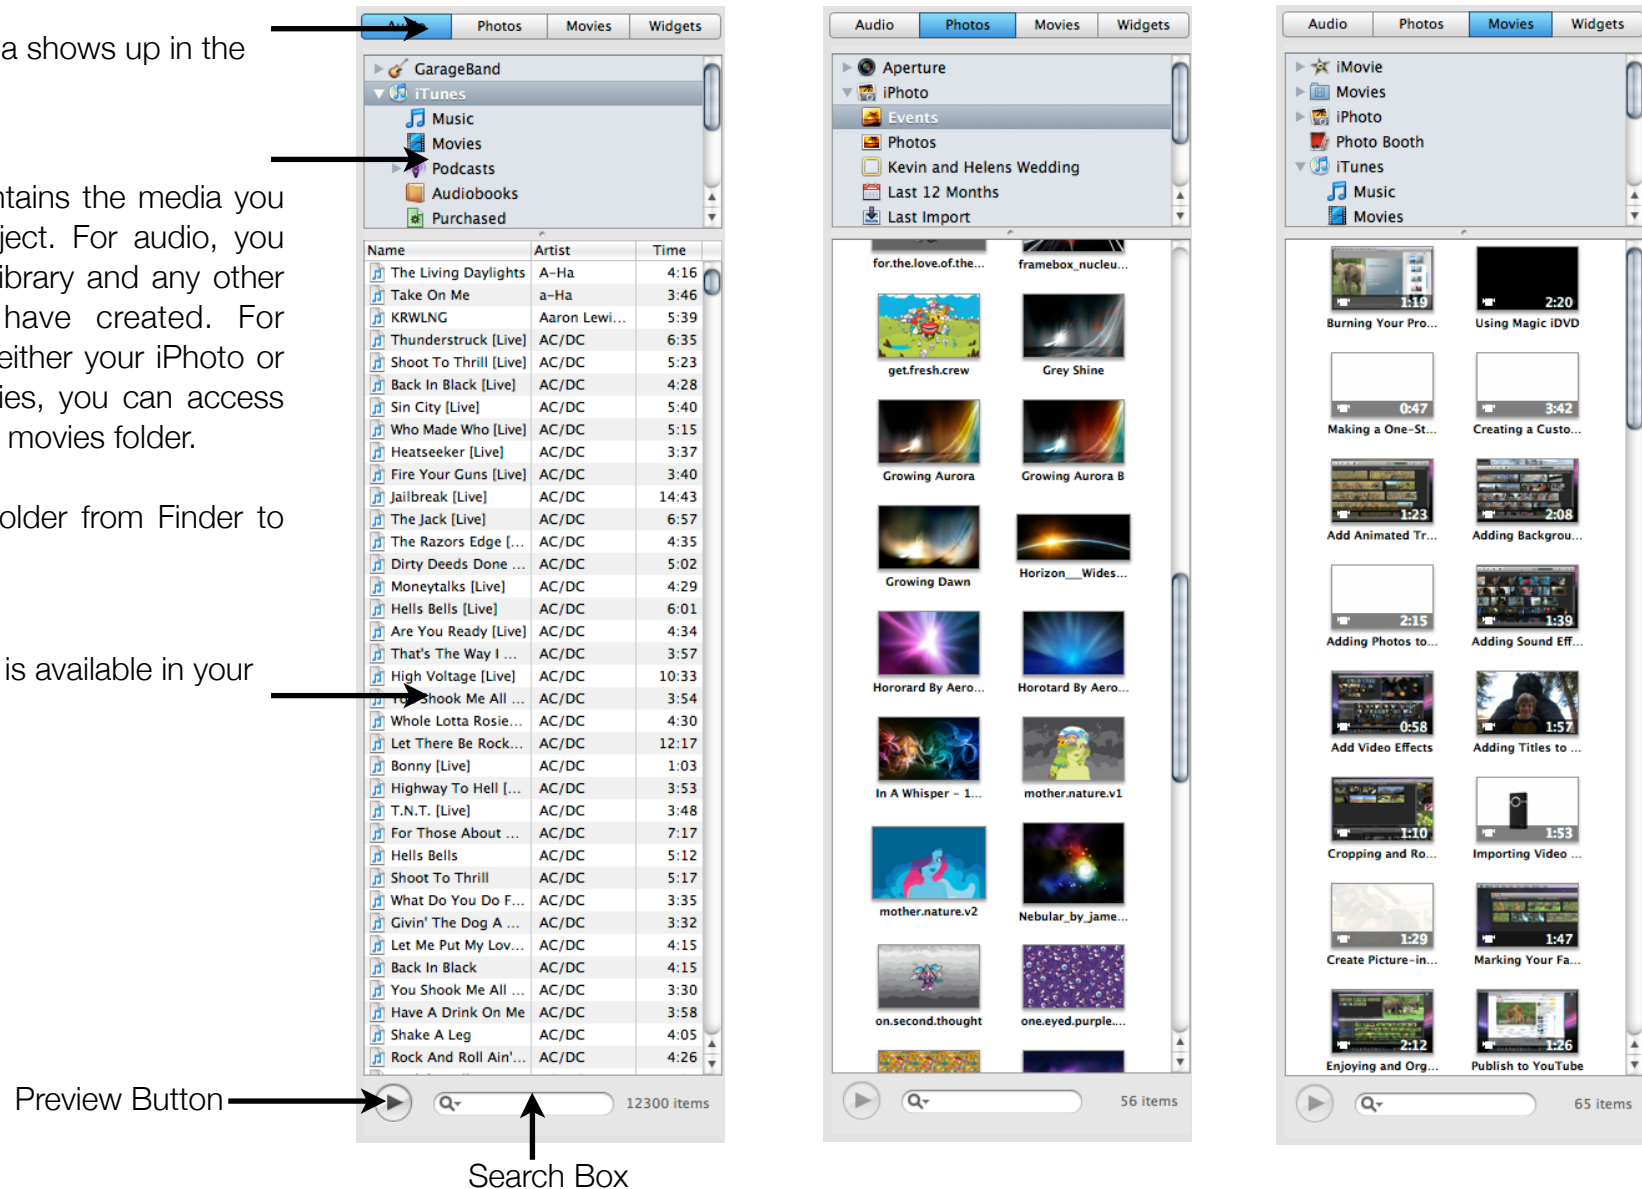

## Source List

Select the folder that contains the media you want to use in your project. For audio, you can access your iTunes library and any other Garageband files you have created. For photos, you can access either your iPhoto or Aperture library. For Movies, you can access your iTunes library or your movies folder.

You can also drag in a folder from Finder to act as a source.

## Media List

Displays the media which is available in your selected source.

# iWeb '09: Widget Browser

## MobileMe Gallery Widget

Allows you display any gallery, which is held on your mobile me account, on your site.

## Google Maps Widget

Allows you to insert a google map into your site.

## iSight Photo Widget

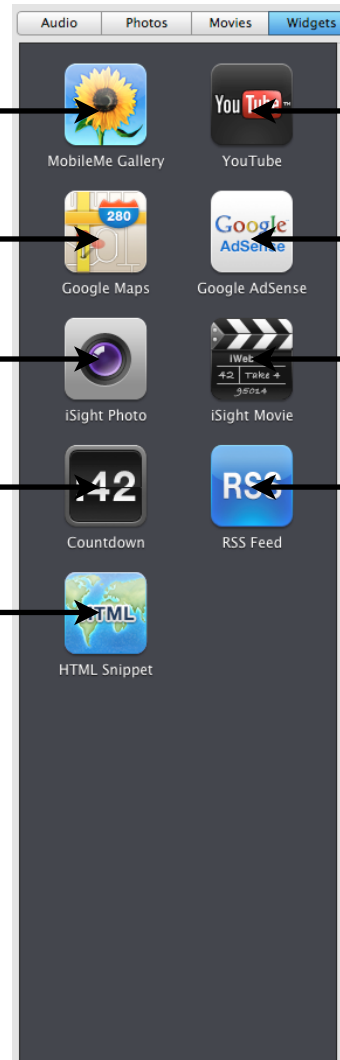

Allows you to take a picture using your iSight camera directly within iWeb.

## Countdown Widget

Allows you insert a customisable countdown timer on your site.

## HTML Widget

Allows you insert HTML code into your site, ideal for allowing you to use features that aren't usually included in iWeb.

## Youtube Widget

Allows you to embed a youtube video into your site.

## Google AdSense Widget

Allows you place google adverts onto your site.

## iSight Movie Widget

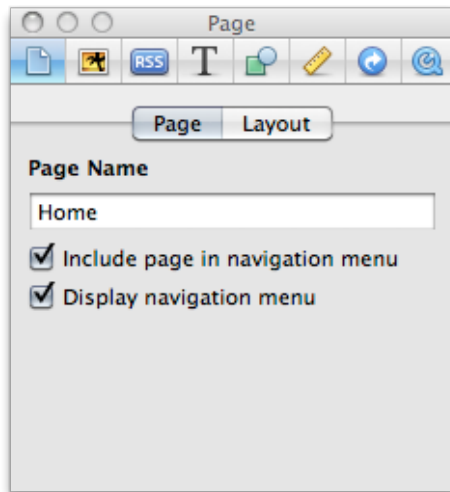

Allows you to record a movie using your iSight camera directly within iWeb.

## RSS Feed Widget

Allows you to insert a RSS feed to your site, this can include feeds from news websites i.e. the BBC or a photo feed from another website.

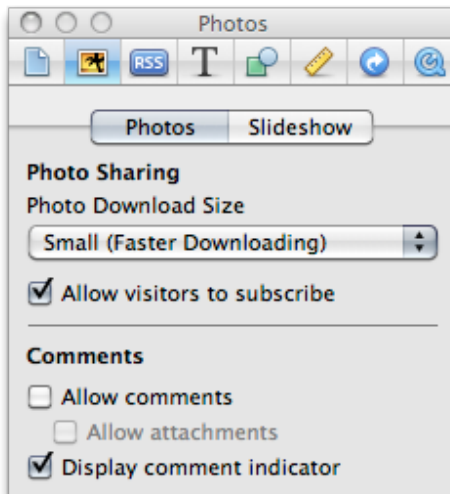

# iWeb '09: The Inspector

## Page

This page of the inspector is used to customise any page on your site. The page tab allows you to set the name of the currently selected page and whether to include it in the navigation bar for the website.

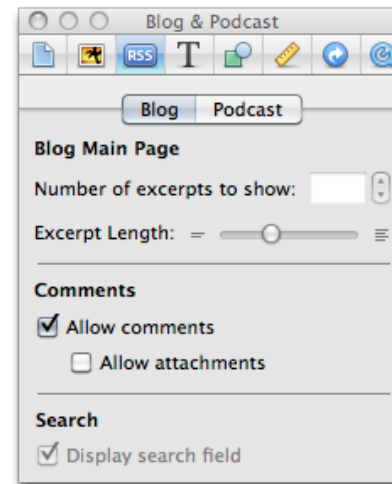

The layout tab allows you to set the dimensions for the currently selected page, as well as background colour for the page and the browser window.

## Photos

This page of the inspector is used to customise the album pages on your site. The photos tab allows you to set the download size of the pictures as well as setting a subscription option for the album and whether comments can be left.

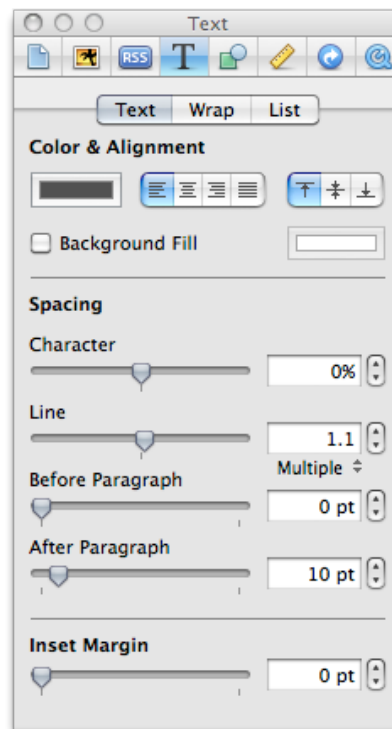

The slideshow tab allows you to set the playback options for the photo slideshow such as the transition to be used.

## Blog & Podcast

This page of the inspector is used to customise all of the blogs and podcasts on your site. The blog tab is used to customise any blog page on your site. It allows you to set the number of the blog excerpts to show on the front blog page, as well as the length of the excerpt and whether comments can be left.

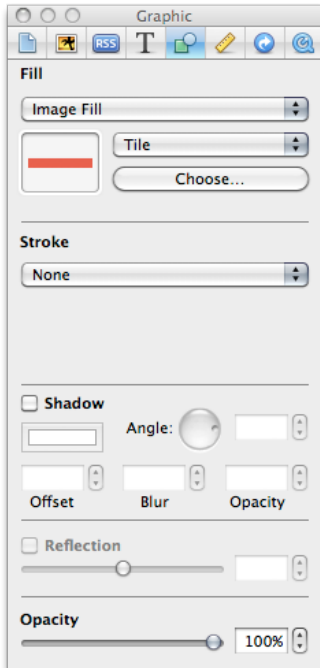

The podcast tab is used to customise any podcast page on your site. It allows you to set the series details for all of the podcasts held on a podcast page, as well as the details for individually selected podcasts.

## Text

This page of the inspector is used to customise all of the text which appears on your site such as the colour of the text and alignment.

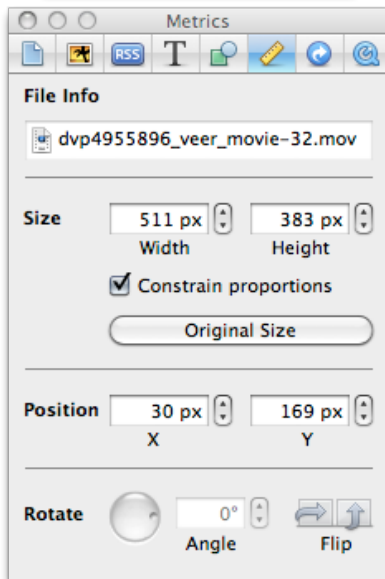

# iWeb '09: The Inspector

## Graphic

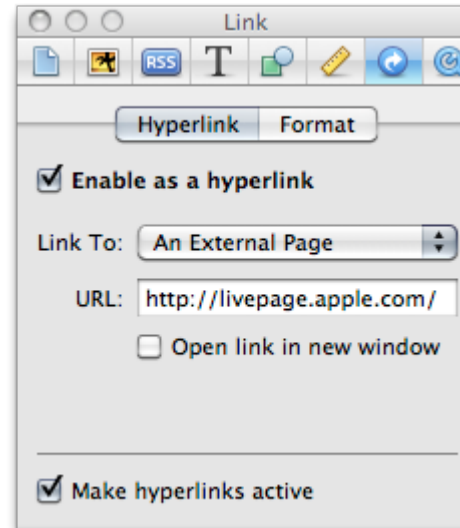

This page of the inspector is used to customise all of the graphics which are displayed on your site. It allows you to set the fill of a graphic using either a solid colour, gradient or a picture.

You can also add a stroke, shadow or reflection to any graphic.

## Metrics

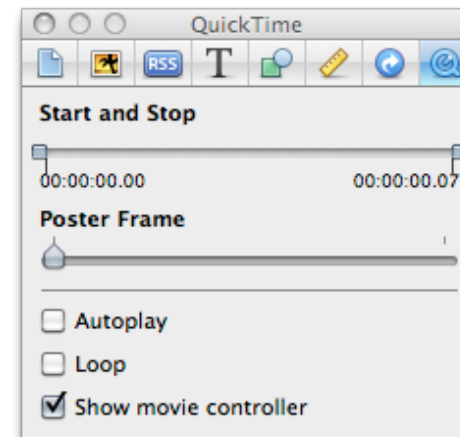

This page of the inspector is used to customise the dimensions of the currently selected item.

## Link

This page of the inspector is used to customise the links on your site. The hyperlink tab allows you to enable the currently selected text as a hyperlink and where the link takes the user.

The format tab allows you to set what colour the link is and whether it is underlined.

## Quicktime

This page of the inspector is used to customise the behaviour of movies on your site. You can set the playback duration, the picture which is shown when the movie is not played as well as whether the movie auto plays or loops.
